

DORRS Transparency Score (DTS)

Tokenized securities are scaling rapidly—but identity is fragmented, governance is opaque, and assets cannot be consistently compared.

DORRS Data introduces a standardized framework that transforms fragmented data into a consistent, machine-readable-structure-bringing clarity to how digital assets are understood and assessed.

The results is a market where assets can be evaluated with confidence and institution can operate with the rigor expected in traditional financial systems.

From fragmentation to clarity
One standard. Every market. Global scale.

Regulatory Alignment - CLARITY Act Readiness

The results is a market where assets can be evaluated with confidence and institution can operate with the rigor expected in traditional financial systems.

A Market without Standards is not a Market

Tokenized securities are growing rapidly—but they lack the most basic infrastructure.

No consistent issuer identity

No standardized asset identification

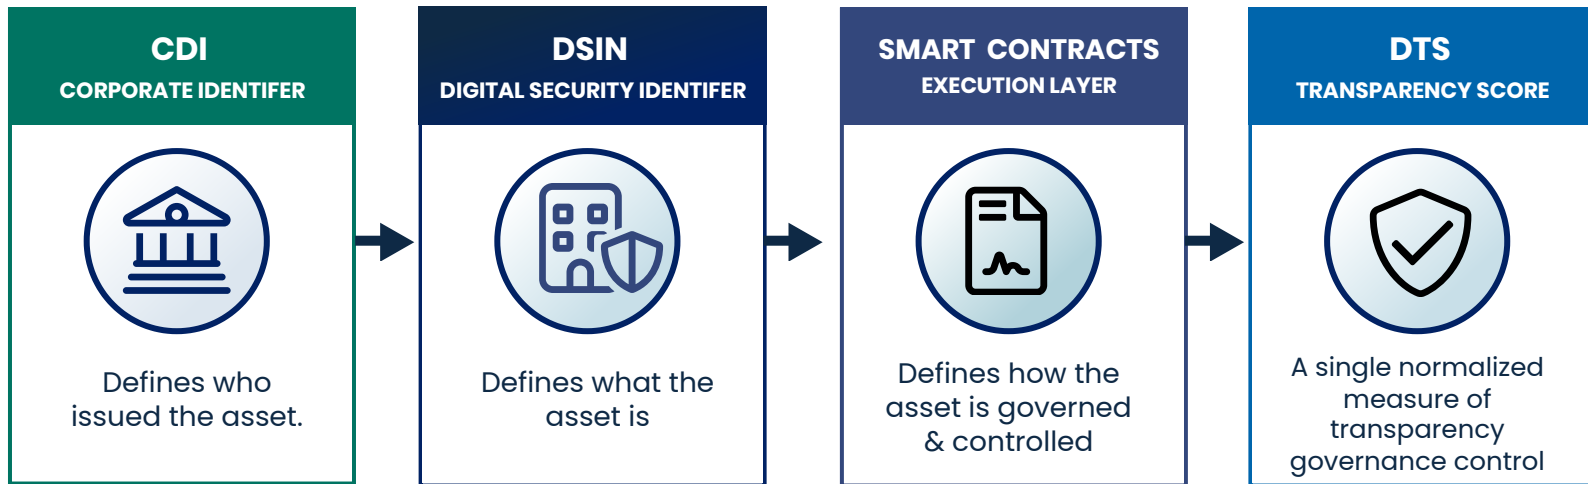

No visibility into governance & control

No way to compare assets across platforms & blockchains

DORRS Transparency Score (DTS) introduces the first standardized identity and transparency framework for tokenized assets and securities.

Together they create a persistent structure across blockchains, smart contracts, and trading venues.

PERSISTENT IDENTITY ACROSS ECOSYSTEMS
